CAD Design Project 1 – OpenROAD (Part I)
Due: 23:59, Sep. 20, 2023

OpenROAD is a United States DARPA IDEA project that pursues open-source tools for 24-hour, "**no human in the loop**" digital layout generation across integrated circuit, package, and board domains. The development of open-source self-driving design tools is an ambitious "**moonshot**" project with numerous technical and cultural challenges. Up to now, six major design-flow stages, **synthesis**, **floorplanning**, **placement**, **clock tree synthesis**, **routing**, and **finishing**, have been developed. In this start-up project, you will study the OpenROAD design flow.

Please submit a preliminary study report according to the following rules:

1- The font size of your report is 12 in PDF format.

   (NOTE: The uploaded file name should be the same as your student ID.)

2- Elaborate on the incremental progress of each step and provide necessary screenshots (and output texts) to support your observations.
